

Project Name: Margaret Wallace Subdivision Improvements

Project Year: 2013

Location: Staunton, Malvern, Southside & Margaret

CIP Project:

Council District: 2

Type / Source: Storm Water / Department

CIP Ranking: 68

Description

This project is located in the Margaret Wallace Subdivision, which was platted in 1949. The project consists of the reconstruction of an existing bridge for the crossing of an unnamed tributary of Still Creek by Staunton Street. The bridge structure is designed in such a manner that debris flowing in the channel causes the culverts to become clogged virtually with each rain substantial event. When the culverts become clogged, runoff flows on Staunton Street to Malvern Street. The runoff then proceeds southeast on Malvern Street to Southside Street. The runoff then proceeds along Southside Street to Margaret Street. The runoff then flows southeast to the dead end of Margaret Street to the unnamed tributary.

Justification

This situation is a continual maintenance item for the Transportation Division staff. In addition the continued runoff is a safety hazard for the residents and precludes access to the residences in the area during storm events.

Funding

Funding	Original	Source	2013
General	\$25,000	General Fund	\$31,000
Design/Survey	\$25,000		\$31,000
